RESEARCH	Job Market Paper “Paycheck frequencies, wages, and the need for liquidity of workers in the U.S.” <i>Abstract:</i> American workers who receive weekly paychecks tend to earn lower hourly wages and have less liquid wealth than those who are paid every two weeks. I explain these stylized facts by showing, through a labor search model incorporating workers’ liquid assets, that frequency serves as a compensating differential on the labor market. Workers with less liquidity are willing to accept jobs that pay more frequently in exchange for lower wages, because the frequent payments help them smooth their consumption within a month without the need to resort to expensive loans. The distribution of liquidity in equilibrium plays a key role in underpinning the wage distributions conditional on pay frequency.
